

454 Fibre Glass Mesh

Lime Green 454 fibre glass mesh is for use with lime plaster. It improves impact resistance on boards and helps prevent cracking. The mesh is optimised in grid size and tear resistance for Lime Green Solo and other fine grained plasters.

Technical Information

Roll Length	50m
Width	1m
Mesh Size	4x4.5mm
Tensile Strength	≥2000N/5cm

Instructions

Apply the plaster in 2 passes the same day.

In the first pass, the 454 mesh is pushed in to the plaster while it is still tacky, normally in vertical strips. Overlap joins in the mesh by 10%

It may also be used around windows, doors and lintels etc; apply a strip diagonally across the corner (pre-cut window corner pieces are also available).

NB: This mesh is not suitable for basecoats or coarse grained products with a maximum aggregate size of more than 1mm.

Storage

Rolls should be stored dry, between -10 and +50°C
